OPENSLAVA 2026 · HANDS-ON LAB · IBM

Agentic AI, Live: Orchestrating Agents with Real-Time Data

DAY	TIME	ROOM	STACK
Wednesday 14 October	15:00–17:30	Room 2	watsonx Orchestrate · Confluent · IBM Bob

Before you arrive: **15 minutes at home**

Set up IBM Bob and install the tools now. Verification emails and installers are the slowest part of the day; do them at home and you start building straight away. You'll get the workshop files and the step-by-step guide in the room.

DONE BY
Wed 14 Oct, 15:00

01 IBMid + IBM Bob — ~5 min

- [ ] **IBM Bob trial**
  bob.ibm.com/trial → Start your free trial
  Sign in with your IBMid, or create one when asked. Free for 30 days, no payment details.
- [ ] **Sign up with your email**, not "Continue with Google"
  Social login causes access problems later in the lab. No verification code? Check spam; use the newest one.

03 watsonx Orchestrate — optional · ~10 min

- [ ] **Start the trial** with the **same IBMid**
  ibm.com/products/watsonx-orchestrate → Start your free trial
  Name `openslava-lab-<yourname>` · region **Frankfurt (eu-de)**.
  Done when you see the watsonx Orchestrate chat and the **Build** menu.
- [ ] **Get your credentials**: profile icon → **Settings** → **API details**. Copy the **Service instance URL**, then **Generate API key** → **Create** → **Copy**
  The key is shown **only once**. Save both somewhere you can open on the day.

Skipping this? No problem: we do it together at the start of the session.

02 Install — ~10 min

- [ ] **Bob IDE** — bob.ibm.com/download, open it and sign in with your IBMid
  macOS: mac-ARM (M1 or newer) or mac-Intel · Windows: x64 (User)
- [ ] **watsonx Orchestrate ADK extension**, in Bob IDE: Extensions view (`Cmd/Ctrl+Shift+X`) → search "watsonx Orchestrate" → Install
  Install only; don't open it or set up a workspace with it.
- [ ] **Python 3.12 or 3.13** — check: `python3 --version`
  Mac `brew install python@3.12` · Win `winget install Python.Python.3.12`
  Windows installer: tick "Add Python to PATH".
- [ ] **uv** — check: `uv --version`
  Mac `brew install uv` · Win `winget install astral-sh.uv`
  Then open a **new** terminal and check again.

Don't create a Confluent Cloud account yet

We do it together in the lab, so the promo code goes in at the right moment and you're never asked for a credit card. Already have one? Just bring the login.

Bring

- A laptop you can install software on (try at home: work laptops may block it)
- Your charger, and access to your email for verification codes
- If you did step 03: your watsonx Orchestrate URL and API key

You're ready when

- [ ] Bob IDE opens and you're signed in
- [ ] The ADK extension is installed in Bob IDE
- [ ] Optional: watsonx Orchestrate trial + credentials
- [ ] `python3 --version` shows 3.12 or 3.13
- [ ] `uv --version` prints a version

ON THE DAY
Workshop files, step-by-step guide and help in the room

Stuck? No problem. Note the step and the error message, and we'll fix it in the first ten minutes.
